

Nsoft Games Regulations

Lucky Six

Betting on the numbers in Lucky Six is a virtual number betting game, meaning a computer-generated event whose outcome is determined by a Random Number Generator (RNG). Lucky Six offers participants 48 numbers, from which 35 are randomly selected in each round and divided into 8 groups of 6 numbers each. Each group is marked with a specific color: red, green, blue, purple, brown, yellow, orange, and black.

Color arrangement:

1. Red number group: 1, 9, 17, 25, 33, 41
2. Green number group: 2, 10, 18, 26, 34, 42
3. Blue number group: 3, 11, 19, 27, 35, 43
4. Purple number group: 4, 12, 20, 28, 36, 44
5. Brown number group: 5, 13, 21, 29, 37, 45
6. Yellow number group: 6, 14, 22, 30, 38, 46
7. Orange number group: 7, 15, 23, 31, 39, 47
8. Black number group: 8, 16, 24, 32, 40, 48

Each round lasts 5 minutes and consists of the announcement, number generation (displaying the draw), and result publication.

Lucky Six offers 48 numbers (ranging from 1 to 48), from which the participant selects 6 different numbers. During the round of virtual betting, 35 numbers are randomly generated from the 48 offered. If among these 35 there are 6 numbers chosen by the participant, the participant wins a prize equal to the multiplication of the bet amount and the coefficient indicated with the last correct number.

Types of Bets in the Virtual Game "Lucky Six"

- Six numbers one color: The participant guesses the color of the generated group of numbers. The participant will win if 6 numbers of the same color are generated during the round, i.e., the color previously chosen by the participant.
- Even/Odd in the first five: The participant guesses whether there will be more even or odd numbers among the first five generated numbers.
- First number even/odd: The participant guesses whether the first generated number of the round will be even or odd.
- Sum of the first 5 numbers (-122.5+): The participant guesses whether the sum of the first five generated numbers will be less than or greater than 122.5.
- First number (-24.5+): The participant guesses whether the first generated number will be less than or greater than 24.5.
- Color of the first number: The participant guesses the color of the first generated number in the round. The participant can choose one, two, or four colors.

- Number drawn among the first five: The participant guesses whether the chosen number will be among the first five generated numbers.
- Systematic betting: The participant can select more than 6 numbers from the 48 offered, i.e., the participant can choose 7, 8, 9, or 10 numbers, thus forming predefined systems 6/7, 6/8, 6/9, 6/10. To win, the participant must guess at least 6 of the total selected numbers. As the number of selected numbers increases, the number of combinations also increases:
 1. For system 6/7, the number of combinations is 7;
 2. For system 6/8, the number of combinations is 28;
 3. For system 6/9, the number of combinations is 84;
 4. For system 6/10, the number of combinations is 210.

In systematic betting, the win is calculated by multiplying the total bet by the coefficient indicated with the last correct number of the winning combination.

- Advance betting: The participant can place any bet (standard, special, or systematic) up to 10 rounds in advance. In this case, each bet is treated as a separate bet.

Bonus sign

In each draw, the system randomly provides two **bonus signs**. In the case of a winning ticket where a bonus sign was additionally placed next to the selected number, the corresponding odd is increased:

- 1 bonus sign guessed – the odd is multiplied by two
- 2 bonus signs guessed – the odd is multiplied by three
-

Position of the symbols is outcome of random choice and cannot be foreseen.

The minimum amount a participant can bet is 0,50 BAM

In the case of system betting, the minimum stake per draw is 0,01 BAM per combination.

The maximum amount a participant can bet is 100 BAM.

The maximum payout amount to a participant is 100.000 BAM
